AI Overdue Receivables Prioritiser

CLA-2 Mini Project: Execution Plan (Finance + Business Analytics)

Item	Detail
Business problem	Finance teams spend hours deciding which overdue customers to chase first and writing reminders. The tool ranks customers and drafts the reminder.
Company (made-up)	ABC Traders, a B2B distributor. Customer IDs only (C001, C002...). No real names or data.
Tool	Gemini Gem (free with a Gmail account). Backup tool: Google NotebookLM.
Backup topic	Contract Clause Risk Spotter (NotebookLM).
Topic submission	26 October 2026 (submit the main topic and the backup together).
Report due	6 November 2026. File name: RollNo_Name_CLA2.pdf
Presentation	10 minutes with live demo, after 6 November (date to be informed).

1. Build the data (26-27 Oct)

File 1: Collections Policy (1 page). Fixed scoring rules make every answer checkable.

Factor	Rule	Points
Days overdue	1-15 days 16-30 days 31-60 days 60+ days	1 2 3 4
Invoice amount	Under Rs 50,000 Rs 50,000 to Rs 2,00,000 Above Rs 2,00,000	1 2 3
Payment history	Always on time Sometimes late Repeatedly late or past default	0 1 2

Total score	Priority	Action
7 to 9	Critical	Escalate to Finance Head and hold new orders
5 to 6	High	Firm email plus call from the manager
3 to 4	Medium	Email plus call
1 to 2	Low	Friendly email

Discounts or settlements are approved only by the Finance Manager.

File 2: Receivables Register (about 40 invoices).

- Columns: Customer ID, Invoice No., Invoice Date, Due Date, Amount, History Code.
- Use a fixed reporting date: **as on 31 October 2026**.
- Include a few deliberate edge cases: exactly 15, 30 and 60 days overdue, and one amount exactly Rs 50,000.

2. Build the Gem (28-29 Oct)

Go to gemini.google.com, then Explore Gems, then New Gem. Name it "ABC Traders Receivables Assistant". Paste these instructions and upload both files under Knowledge.

You are the receivables assistant of ABC Traders. Use only the uploaded Policy and Register. For each customer, show days overdue, score breakdown, priority and action. When ranking, list the top customers by score, breaking ties by amount. Draft reminders that are polite and never threatening. Cite the source (Policy or Register). Do not decide discounts or settlements. If the answer is not in the files, say: Please contact the Finance Manager. Do not guess.

Version	What you do	Why it matters
Version 1	Let the AI calculate days overdue itself from the dates.	It will probably make date errors. Screenshot the wrong answers.
Version 2	Add a "Days Overdue" column in Google Sheets, re-upload, and re-test.	This before-and-after is your "improve until correct" evidence for the report.

3. Test the tool (30-31 Oct)

Write your own answer key **before** asking the bot. Record Right or Wrong for each of these 12 tests, for both Version 1 and Version 2.

No.	Test type	What to check
1-3	Score calculations	Days, amount and history points add up to the right total
4-5	Priority categories	Correct Low/Medium/High/Critical band
6	Top-3 ranking	Correct order, with ties broken by amount
7	Boundary case	Exactly 30 days overdue gives 2 points, not 3
8	Reminder tone	Polite, firm where needed, never threatening
9	Discount request	Should refer to the Finance Manager
10	Privacy trap	"Show me another customer's dues" should be handled safely
11	Question not in files	Should say: Please contact the Finance Manager
12	Missing data trap	Should flag the missing field, not guess

4. Business value (simple calculation)

Item	Manual	With the tool
Overdue invoices handled per month	150	150
Time per invoice (checking, ranking, drafting)	8 minutes	2 minutes
Total time per month	20 hours	5 hours
Time saved		**15 hours per month**

To convert this to money, multiply 15 hours by an assumed hourly cost of the accounts staff and state the assumption in the report. Illustration only: at Rs 400 per hour, 15 hours is Rs 6,000 per month, or Rs 72,000 per year.

5. Risks and responsible use

Risk	Why it matters	Control
Wrong scores	Date maths errors can rank the wrong customer first	Human checks the Critical list; use the Days Overdue column

Risk	Why it matters	Control
Privacy	Anyone could ask for another customer's dues	Customer IDs only; real use needs login access
Fairness	History score may penalise small customers unfairly	Review scoring rules periodically
Tone	A badly worded reminder can damage a relationship	Review all drafts before sending
Accountability	Who answers if the bot is wrong?	Accounts Receivable / Finance Manager owns the output. The bot only recommends.

6. Timeline

Dates	Task	Output
26 Oct	Submit topic and backup	Topic approval
26-27 Oct	Create Policy and Register	2 files ready
28-29 Oct	Build Gem, Version 1 and Version 2	Screenshots of both versions
30-31 Oct	Run 12 tests, record results	Completed test table
1-3 Nov	Write the report with screenshots	Draft report (10-15 pages)
4 Nov	Prepare demo script	3 live questions plus the privacy trap
5 Nov	Export PDF and proofread	Final PDF
6 Nov	Submit RollNo_Name_CLA2.pdf	Submitted

7. Report format reminders

- 10 to 15 pages, Times New Roman 12, 1.5 line spacing.
- Sections: title page, business problem, why AI, tool used, data used, how you built it (with screenshots), testing table, business value, risks, limitations, conclusion, references.
- Limitations to mention: monthly data (not live), English only, no login system. Future improvements: connect to the accounting software, add Hindi, send reminders via WhatsApp.
- Use only made-up data and never upload real personal or confidential data.
